

ABAS MOBILE WAREHOUSE TIME AND COST OPTIMIZATION IN GOODS RECEIPT AND WAREHOUSE

Optimize your warehouse processes using abas Mobile Warehouse. The scanner solution integrated in abas ERP supports you in structuring time and personnel intensive work steps easily, efficiently and reliably. It also helps you in improving the traceability of received goods.

abas Mobile Warehouse can be used flexibly on completely different end devices — from barcode scanners to robust, full-touch handhelds, to forklift terminals. Operation is intuitive and means your warehouse employees will enjoy using abas Mobile Warehouse.

GOODS RECEIPT

Whether it be storage, relocation or retrieval: abas Mobile Warehouse supports throughout all stock movements. New stock is quickly posted by simply scanning a purchase order number on the packing slip. The warehouse location can also be assigned a location number per scan, or it can be set manually. This means the information related to the entry is available in abas ERP in real-time. Alternatively, a warehouse employee can also use the digital outstanding deliveries to create a goods receipt.

MATERIALS ALLOCATION

The materials allocation provides an additional powerful function: you can split a delivery item and assign the goods different lots, containers or locations.

The material and value flow remains — and goods can always be traced.

| Location | Quantity | Lot | External lot | External container number | Packaging material |
|----------------|----------|-----|--------------|---------------------------|--------------------|
| I.P-ROW-KASSEL | 20.0 | Lot | External lot | External container number | Packaging material |
| LP-VF-KASSEL | 10.0 | Lot | External lot | External container number | Packaging material |
| Location | Quantity | Lot | External lot | External container number | Packaging material |

STOCK LEVEL INFORMATION AND RELOCATION

In the stock level information your employees see in which locations which products are available, and in which quantities. If a relocation is required, it can be started directly from the Stock level info.

Or your employees process the relocation using the "Relocate" function. Product numbers, relocated quantities, lots, and issue and receipt location are included and documented in abas ERP when relocating.

Product: 10001

CONTAINER MANAGEMENT

abas Mobile Warehouse also supports the container management in abas ERP. Per handheld you can fill, empty, relocate or create new containers in abas ERP on location at the warehouse. Furthermore, the container info provides you with valuable information such as status, location, use and packaging material type of a container.

Use the many options provided by container management in abas ERP to pick mixed containers with all raw materials for a work order, for example, and to post this directly to a machine location.

| Product | Quantity | Factor | Unit | Lot | External lot | Use | Finished part |
|---------|----------|--------|------|------|--------------|----------|---------------|
| 10001 | 10 | 1 | Pcs | | | | |
| 10002 | 20 | 1 | Pcs | | | | |
| 10003 | 52 | 1 | Pcs | | | | |
| 20022 | 25 | 1 | Pcs | | | | |
| 20022 | 89 | 1 | Pcs | 8765 | 598796336547 | 256987_2 | |

PURCHASE ORDER SUGGESTIONS

If an employee determines that a product is not available or the minimum stock level has been reached, using the "Purchase order suggestions" function, he can check in abas Mobile Warehouse if a reorder has been triggered.

If this is not the case, he has the option of creating a purchase order suggestion in the app to draw the sales departments' attention to the requirement. The clear representation of already triggered purchase order suggestions prevents the multiple notification of requirements.

STOCKTAKING

Process stocktaking more quickly and more professionally in the future. abas Mobile Warehouse offers comfortable data entry per scan using a digital inventory sheet generated from abas ERP. If an employee oversees an item, he receives a notification. This prevents entry errors and having to make corrections at a later date. Directly after counting, stocktaking can start in abas ERP - the process duration is significantly shorter.

| Item number | Lock ID | Product | Location | Quantity counted | Added quantity |
|-------------|---------|-----------------------------------|--------------|------------------|----------------|
| 1 | 1 | 20021 - SR200 Housing top, raw | LP-VF-KASSEL | 0.0 | 0.0 |
| 2 | 2 | 20022 - SR200 Housing bottom, raw | LP-VF-KASSEL | 0.0 | 0.0 |
| 3 | 3 | 20022 - SR200 Housing bottom, raw | LP-VF-KASSEL | 0.0 | 0.0 |
| 4 | 4 | | | | |
